

Ceramic Ink Digital Print on Glass

***Fade-proof
Scratch Resistant
Artistic Designs
Unlimited Possibilities...***

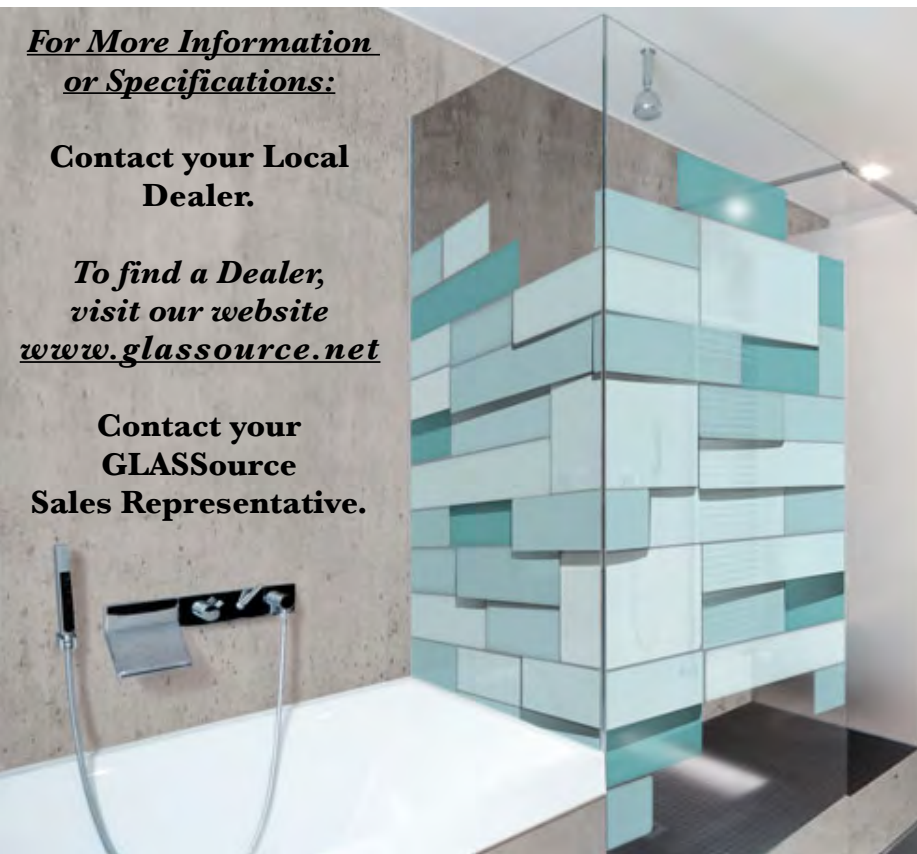

Ceramic frit is ***applied directly onto the glass*** using software to ***convert digital images into ceramic print***, similarly to an inkjet printer. The frit is ***fused to the glass during our in-house tempering process***. Once tempered, the frit is ***permanently bonded*** to the surface and is ***as resistant to abrasion & chemicals as the glass*** surface itself, making it suitable for a variety of ***interior and exterior*** applications.

Fabricators of Quality Glass Products

Spot Colors

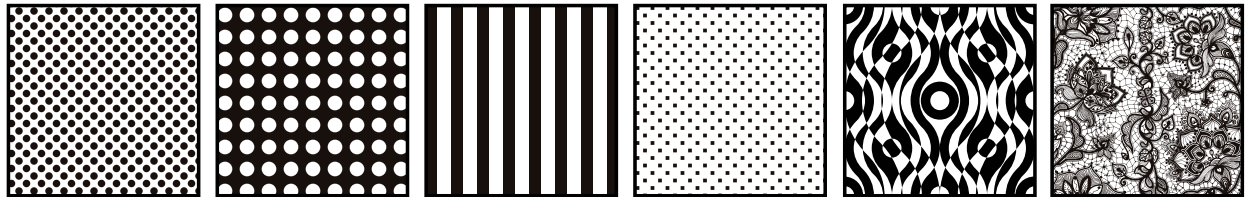

Our Frit ink spectrum differs from that of CMYK or RGB. Instead, colors are made using *a mix of 6 basic "Spot" Colors.*

Using Dip-Tech ceramic inks, **the six spot colors can be combined to achieve a broad spectrum of colors!**

Pattern Generator

Vector Patterns

Circle. Dot On.
Size 1mm, Gap 2mm.

Circle. Dot Off.
Size 2mm, Gap 3mm.

Line. Vertical.
Size 1.5mm, Gap 2mm.

Square. Dot Off.
Size 1.5mm, Gap 2mm.

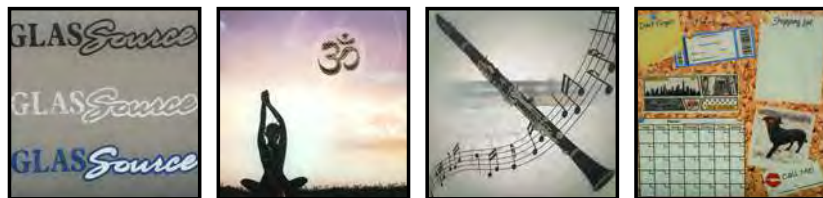

Optical Illusion
A repeatable optical illusion.

Lacey
A repeatable replication.

Using our Pattern Generator, **we can create simple vector patterns customized by shape, size, gap, coverage, & angle!**

Vector Patterns are repeatable patterns, **scalable to any size without losing resolution.** **Vector Patterns can be customized with a variety of colors.**
